WE ARE HIRING!
ROLE - TECH LEAD

WealthOS, a cloud-native SaaS provider, is building the next-gen enterprise wealth management platform for UK, US, and European clients. We're seeking a seasoned, creative Technical Lead to drive engineering excellence, architecting cutting-edge solutions that will define the future of wealth management.

KEY RESPONSIBILITIES

- Lead a team of 4-6 developers, and be responsible for the quality and timely delivery of business features and non-functional requirements.
- Develop an in-depth understanding of the WealthOS code base. Use this knowledge to provide day-to-day guidance to developers, including technical designs, code reviews, hands-on coding for complex implementations, and troubleshooting guidance for production issues.
- Review the team's code and technical designs to ensure best practice compliance, maintainability, and implementation of scalable software architecture standards.
- Work in an agile environment: take end-to-end ownership of stories from design to production; guide the team through prioritising, estimating and tracking their work to completion.
- Collaborate with Product Owners, Architects and QA Engineers to design and build the WealthOS platform.
- Actively participate in client meetings, demos, and presentations when required to provide technical expertise and insights to address client needs and showcase our solutions.

YOU MIGHT BE THE 'ONE' IF:

- You have a collaborative, positive attitude - we are a close-knit team, and are looking for someone who wants to grow with us.
- You have spent six years or more working as a developer in an agile environment, with at least one year or more in a team lead role.
- You have a strong proficiency in any modern programming language (JavaScript/Typescript, Java, Go, Rust, Python, or C++). Experience in JavaScript/TypeScript and React is a definite plus.
- You can effectively communicate and collaborate with different parts of the organisation, including product owners, Architects and QA engineers.
- You must have a strong understanding and experience in microservices architecture, SaaS concepts, functional & non-functional testing, DevOps, CI/CD, cloud deployments, and infrastructure automation strategies.
- Prior exposure to some or all of the following is a bonus:
  - Building enterprise fintech platforms, hands-on development experience with MERN stack, Redis, Docker, Terraform, APIs (REST, Web Sockets, WebHooks), and AWS technologies, such as Lambda, DynamoDB, API Gateway, SQS, CloudFormation, and SAM.

Ready to join the WealthOS team? Apply now by completing this assessment.

For the right fit, we're looking to offer a GBP, above-market rate compensation package.
We follow flexible hours, and have a hybrid working culture. We are an equal opportunity employer and value diversity at our company.
