

WE ARE HIRING!

ROLE : INTERN - SOFTWARE ENGINEERING

WealthOS is a cloud-native, core wealth management SaaS. We're looking for is a creative problem solver who likes to work with a team, everything else, you will learn on the job.

WHAT YOU WILL LEARN

Life at an early stage startup is fast-paced and execution-focused. You immediately get a seat at the table to work with the most senior members of the team and learn from them. Some of these are hard skills as listed below. But others are less obvious - handling pressure, prioritisation, how to deal with mistakes, conflict resolution and more. The prerequisite is an open and curious mind.

- Work with world-class architects and technologists who have significant experience building mission-critical, cloud-native, enterprise platforms globally.
- Learn build+test best practices, design patterns and coding standards.
- Working in a fully agile environment with dev, product and test where you take full ownership of your work - this includes fixing what you break :)
- Learn about wealth management: the key concepts and core features required from product owners and subject matter experts globally.

YOU MIGHT BE THE 'ONE' IF:

- You have a collaborative, positive attitude - we are a close-knit team, and are looking for someone who wants to grow with us.
- You are naturally numerical and analytical.
- You aren't afraid to try new things and make mistakes.
- You are highly motivated, eager to learn, and have a strong work ethic.
- You are passionate about software development and have a desire to build high-quality software products.
- You have knowledge of OOP concepts and design patterns.
- You have a solid understanding of data structures, algorithms, and software design principles.
- You have experience with one or more programming languages
- Familiarity with JavaScript/TypeScript, React, RESTful APIs, CSS/SCSS, AWS, MongoDB will be an advantage.

ABOUT US

At WealthOS, we are absolutely passionate about changing the fundamental nature of the wealth management industry through technological innovation. We believe that upgrading out-of-date, non-digital friendly tech will empower everyday people like us by giving financial security and equal access to high-quality wealth management products and services.

So starting with the UK, we are changing the wealth tech landscape and updating the industry by building an enterprise (B2B) wealth management platform. We are looking for passionate, curious and smart people to join WealthOS on this journey.

We are global; headquartered in the UK with the core product and engineering team in Sri Lanka, testing team in Europe, subject matter experts in the UK, and our first client targets in UK and Europe!
