

WE ARE HIRING!

ROLE - UI/UX ENGINEER

WealthOS is a cloud-native, core wealth management SaaS, building a next-generation, enterprise, core wealth management platform for UK, US, and European clients. We are looking for a highly collaborative and skilled UX/UI Designer who can create delightful user experiences and optimise our cross-platform solutions.

In this role, you will actively contribute to the discovery, concept development, and implementation of user-centric experiences across various digital assets, serving a diverse range of audience segments. As a member of our team, you will work collaboratively across our group, in the UK and Sri Lanka. Your expertise and eye for detail will be invaluable in our pursuit of providing next-generation wealth management solutions.

KEY RESPONSIBILITIES

- Create user-centric experiences that captivate and engage our users.
- Work closely with Product and Development teams throughout the entire project lifecycle, from initial concept to final implementation.
- Perform stakeholder interviews and conduct research to develop user flow diagrams, journey maps, conceptual wireframes, prototypes, and high-fidelity designs to effectively communicate your design vision.
- Play a key role in enhancing and maintaining the product design system, ensuring a consistent and cohesive user experience across our entire product suite.
- Engage in design reviews and serve as a role model for best practices in delivering and receiving constructive feedback.
- Stay abreast of current industry trends and market conditions to inform your design decisions and keep our products at the forefront of the industry.
- Demonstrate a strong commitment to continuous learning and self-improvement.

YOU MIGHT BE THE 'ONE' IF YOU:

- Possess a minimum of three years of professional experience in the capacity of a UX/UI Engineer.
- Showcase a comprehensive portfolio that substantiates your prior work and expertise.
- Demonstrate a solid grasp of user-centered design principles, emphasizing accessibility and usability in your work.
- Have proven experience collaborating with scrum teams in an agile work environment.
- Exhibit an expert-level proficiency in Figma, which is an absolute requirement.
- Have strong written and verbal communication skills in English.
- Show evidence of employing research and data to inform decision-making.
- Are recognised for your meticulous attention to detail, ensuring pixel-perfect designs.
- Embody a team-oriented spirit, openness to change, and a proactive "can-do" attitude.

Familiarity with HTML/CSS would be considered a valuable asset.

For the right fit, we're looking to offer a GBP pegged, above-market rate compensation package.

We follow flexible hours and have a hybrid working culture.

We are an equal opportunity employer and value diversity at our company.
