

WE ARE HIRING! ROLE - QA LEAD

WealthOS is a cloud-native, core wealth management SaaS, building the next-generation, enterprise, core wealth management platform for UK, US, and European clients.

As the QA Lead, you will be involved throughout the CI/CD process to ensure high, consistent quality. You will also be responsible for setting up the test automation practice and implementing a test harness.

WHAT YOU WILL DO

- Develop test strategy and test plans for functional and non-functional testing of product features.
- Develop and execute test cases, scripts, and procedures (manual and automated)
- Drive test framework development and maintenance.
- Evaluate the existing test suite and suggest further improvements.
- Actively manage, report and escalate test status, defects, and risks/issues.
- Collaborate with WealthOS clients to plan, review, execute and report on UAT cycles.
- Ensure environments needed for all types of testing are ready and available from data, access, etc.
- Research and recommend tools to optimise testing and increase automation.
- Support, groom and mentor QA engineers.

YOU MIGHT BE THE ONE IF:

- 6+ years of experience in software quality assurance, capable of both automation and manual testing.
- 2+ years of experience testing Enterprise systems implemented in a SaaS environment.
- Experience developing automation frameworks (BDD or hybrid frameworks) using multiple programming languages.
- Experience in API and UI testing.
- Experience working with Jira, Confluence, Bitbucket, Jenkins and AWS tools.
- Experience leading a team of QA engineers.
- Experience working in an Agile/Scrum development process.

If you're the one please send your CV to careers@wealthos.cloud

For the right fit, we're looking to offer a GBP-pegged compensation package. We follow flexible hours and have a hybrid working culture. We are an equal-opportunity employer and value diversity at our company.
