

WE ARE HIRING

ROLE - QA ENGINEER

At WealthOS, we are at the forefront of developing an enterprise-level, cloud-native core wealth management SaaS platform catering to a global clientele. In our dynamic tech startup, you can expect an environment free from corporate hierarchies. We're on the lookout for a creative problem solver and quick learner to join our close-knit, experienced team. We'll ensure a smooth onboarding process, getting you up to speed in no time as we collectively drive innovation in the world of wealth management.

KEY RESPONSIBILITIES

- Be part of an agile scrum team working closely with the Product and Engineering team to deliver high-quality product features.
- Create detailed, comprehensive and well-structured test plans and test cases.
- Design, develop and execute automation scripts using open-source tools.
- Perform thorough regression testing.
- Create and prep test environments with data, access, etc
- Get involved in test framework development and maintenance.
- Evaluate the existing test suite and suggest further improvements.
- Research and recommending tools that can be used by the company to improve platform testing

YOU MIGHT BE THE 'ONE' IF:

- 1+ years of experience in Software Quality Assurance, capable of both automation and manual testing.
- Experience in writing test scenarios and test cases.
- Experience in Postman and API testing.
- Experience working with tools like Jira, Confluence, Bitbucket, Jenkins etc.
- Experience working in an Agile/Scrum development process
- Have a Bachelor of Science degree in Computer Science, Engineering or a related subject

Ready to join the WealthOS team? Apply now through our [vacancy form](#).

For the right fit, we're looking to offer a GBP compensation package. We follow flexible hours and have a hybrid working culture. We are an equal-opportunity employer and value diversity at our company.
